RE: Wisconsin Public Service Gas Facility Upgrade

Shortly after Labor Day, WPS will start upgrading their gas facilities between Church Street and their Mann Street Gas Metering Station. The new pipe will be 8-inch welded steel pipe. The pipe will be installed using directional drilling, which will minimize traffic impacts and limit pavement restoration. The project is estimated to take 2-3 months to complete.

The work will start on Church Street at Mary Street, continue north along Church Street to Main Street, proceed west along Main Street to Mann Street, turn onto Mann Street, and end at WPS's Mann Street Gas Station.

Traffic control will be installed for lane closures, road closures, and sidewalk closures. Road closures will be open to local traffic only. We ask motorists to use caution and reduce speed when approaching the construction zone and while traveling near construction activities.

If you have any questions regarding this project, please call WPS at **920-272-8799** or E-Mail them at EasementRequest@wecenergygroup.com. When contacting them about this project, please reference work request number **3413664**.
